ABOUT ME

I am a proactive and detail-oriented Computer Science student with hands-on experience in software development, web design, and artificial intelligence. My academic journey, complemented by internships and project-based learning, has equipped me with a solid foundation in C, C++, Java, and Python, among other technologies. I thrive in collaborative environments where innovation and problem-solving are key, and I am passionate about applying my skills to develop efficient and scalable solutions. I am eager to contribute to cutting-edge projects in the tech industry while continually advancing my expertise.

PROJECTS

[Current]

Aspect Based Sentiment Analysis

A deep learning-based sentiment analysis for e-commerce products review extraction and analyzation for creating a better recommended system.

Contributions:

- Banglish annotated dataset.
- Fine tuned model for Banglish ABSA

Object Detector

This object detector project demonstrates the application of computer vision and machine learning for real-time object/scene classification. The user-friendly interface allows for easy data collection, model training, and real-time predictions
